

## COFFEE TRADE ON 7/19 – SYMBOL KC

The Pearson's Indicator lines showed that the active phase of the Barydyne Signal was Secondary.

The CCI-13 Indicator, on 7/19, was above +100 - which was in sync with the Barydyne Signal that was forecasting a rise into 8/07.

The Barydyne Signal also showed that there would be some volatility in the price action with the potential to have a correction that would take the price below the entry level.

That is exactly what happened - but the trend reversed back to a rising trend.

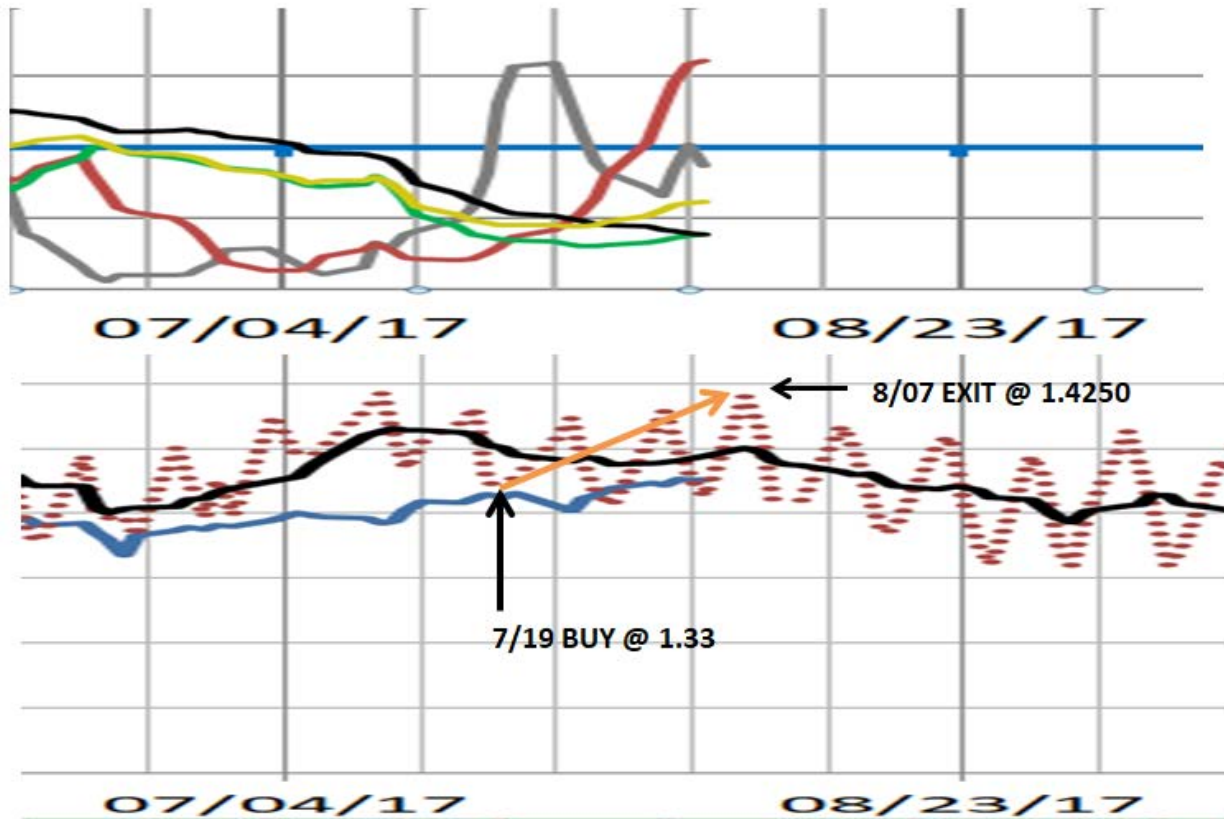

This is well illustrated in the technical chart below.

The long was entered on 7/19 at the price of \$1.33 per pound.

The trade of three September Futures Contracts (112,500 pounds) was exited on 8/07 at \$1.4250 per pound yielding a gross gain of \$0.0950 per pound.

For the three contract trades - the gross gain was therefore \$10,687.50 - or a 109.04% gain on the initial investment of \$9801.00.
